## BACKGROUND

- Compared to White women, African American/Black women are more likely to develop triple-negative breast cancer, an aggressive breast cancer subtype.
- While many studies have examined individual-level socioeconomic status (SES) as a major social determinant of more aggressive breast tumor phenotypes, the impact of neighborhood-level SES on breast cancer is not well understood, particularly among Blacks.

## OBJECTIVE

- To evaluate the impact of neighborhood SES on breast cancer subtypes among Black women with breast cancer.

## METHODS

- Study population:** 1,220 Black women with invasive breast cancer enrolled from 10 counties of New Jersey from 2006 to 2018 in the Women's Circle of Health Study (WCHS).
- Data collection:** Participants completed an interviewer-administered questionnaire, which included detailed questions on socio-demographic, lifestyle, and reproductive factors, comorbidities, and family history of cancer.
- Hormone receptors and HER2 status from patients' pathology reports, tissue microarrays, and New Jersey State Cancer Registry files.
- Residential address at diagnosis was geocoded to the census tract-level.
- Neighborhood SES was measured at the census tract-level by the Yost index, a year-specific score constructed by NCI via a factor analysis of seven variables (Table 1).

Study Area

Table 1. Neighborhood SES index components

Education index
Percent unemployed
Percent working class
Median household income
Percent below 150% of poverty line
Median house value
Median rent

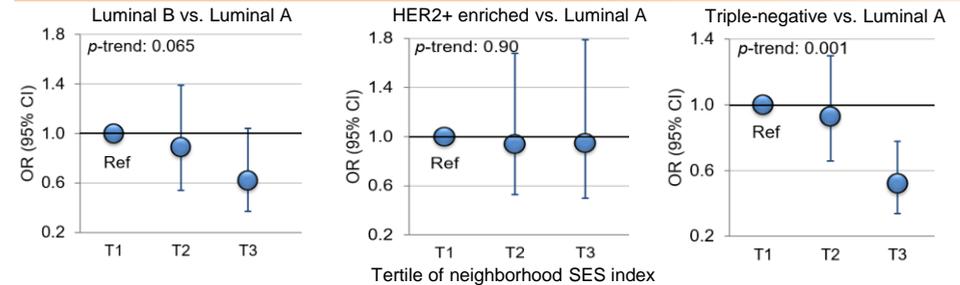

- Statistical analysis:** In a case-only analysis, we used multilevel multinomial logistic regressions to estimate neighborhood SES in relation to breast cancer subtype (triple-negative, HER2-enriched, luminal B vs. luminal A).
- Models were adjusted for individual-level SES variables, body mass index and reproductive factors, and census tract-level percentage of Black residents.
- We tested whether the associations were modified by percentage of Black residents and participant's education.

## RESULTS

Table 2. Selected characteristics of Black women with invasive breast cancer in the WCHS (n = 1,220)

	n	(%)
<b>ER status</b>		
ER+	837	(68.6)
ER-	383	(31.4)
<b>Molecular subtype</b>		
Luminal A	710	(58.2)
Luminal B	143	(11.7)
HER2+ enriched	88	(7.2)
Triple negative	279	(22.9)
<b>Age (Mean±SD)</b>	53.8	±10.8
<b>Foreign born</b>	200	(16.4)
<b>Education</b>		
≤High school graduate	494	(40.5)
Some college	368	(30.2)
≥College	358	(29.3)
<b>Household income</b>		
<\$50,000	652	(53.4)
≥\$50,000	500	(40.9)
Unknown	68	(5.6)
<b>Health insurance at diagnosis</b>		
Private	672	(55.1)
Medicaid	166	(13.6)
Medicare	171	(14.0)
Uninsured	144	(11.8)
Other/unknown	67	(5.5)
<b>Marital status</b>		
Married/living as married	434	(35.6)
Single/other	786	(64.4)
<b>BMI 1 year before diagnosis (kg/m<sup>2</sup>, mean±SD)</b>	31.5	±7.0
<b>Post-menopausal</b>	738	(60.5)
<b>Age at menarche, y</b>		
<12	330	(27.1)
12-13	594	(48.7)
>13	296	(24.3)
<b>Age at first birth</b>		
Nulliparous	198	(16.2)
<25 y	704	(57.7)
≥25 y	318	(26.1)
<b>Parity ≥3</b>	396	(32.5)
<b>Ever breastfed among parous women</b>	415	(40.6)
<b>Ever oral contraceptive use</b>	854	(70.0)
<b>Smoking status</b>		
Never	719	(58.9)
Former	278	(22.8)
Current	223	(18.3)
<b>Census tract %Black residents</b>	46.7	±30.6

Figure 1. Neighborhood SES and breast cancer subtypes among Black women in a case-only analysis

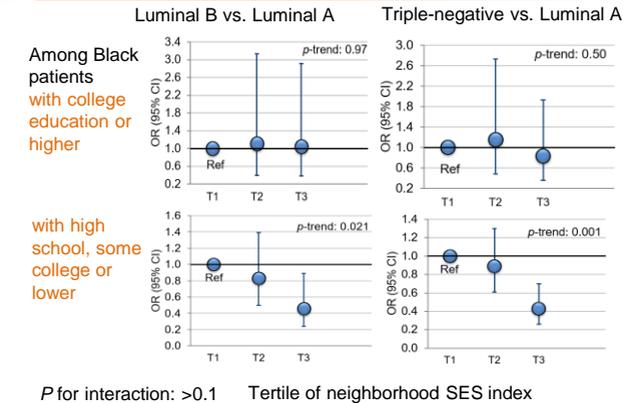

Model adjusted for age, education, insurance status, menopausal status, age at first birth, BMI 1 year prior to diagnosis, and census tract-level percentage of Black residents.

Figure 2. Neighborhood SES and breast cancer subtypes among Black women stratified by percentage of Black residents

P for interaction: 0.09

Figure 3. Neighborhood SES and breast cancer subtypes among Black women stratified by education

P for interaction: >0.1

## CONCLUSION

- Neighborhood socioeconomic environment may influence the development of triple-negative breast cancer among Black women.
- Such impact might be buffered by some contextual factors in areas with more Black residents. Further investigation to elucidate these factors is needed.
